Bioinformatics Workflow Developer

Who we are

Data Intuitive creates innovative IT solutions for biotech through synergy of talents, knowledge and skills.

We specialise in developing bioinformatics workflows in a highly effective and efficient manner.

What we need

We are looking for a scientifically minded individual to become part of the core of Data Intuitive.

Data Intuitive is starting up a new chapter and needs a motivated, experienced key person to help us make this major step. A motivated individual eager to contribute to our strategic projects in data science through workflow implementations.

What we offer

We offer a competitive salary, benefits, possibility of company car and equity stake for the first employees.

This is a full-time role, working remotely predominantly with a lot of flexibility in different ways to suit your personal circumstances.

The team meets in the region of Ghent at a shared working space at key times throughout the year.

Job requirements

- Understanding of fundamental biological principles
- A degree in bioinformatics, software engineering, computational biology, or other degree or proven experience in line with the requirements for this job
- Strong analytical skills
- Strong problem-solving skills
- Independent and team player
- Driven by a technological curiosity and desire to make things better
- Fluent in English

Technical skills

- Experience with scripting languages (shell, python, R, etc.)
- Experience with using version control tools (Git/GitHub) and Jira
- Good knowledge of Linux based operating systems, libraries and tools
- General knowledge of software build automation (make, etc.)

Nice to haves:

- Knowledge of modern workflow management systems (Nextflow, Snakemake, …)
- Knowledge of containerisation (Docker, Singularity, Kubernetes, …)
- Knowledge of high performance computing environment
