

Data Intuitive within the R&D Value Chain

The Intuitive Data Workflow Quality Framework

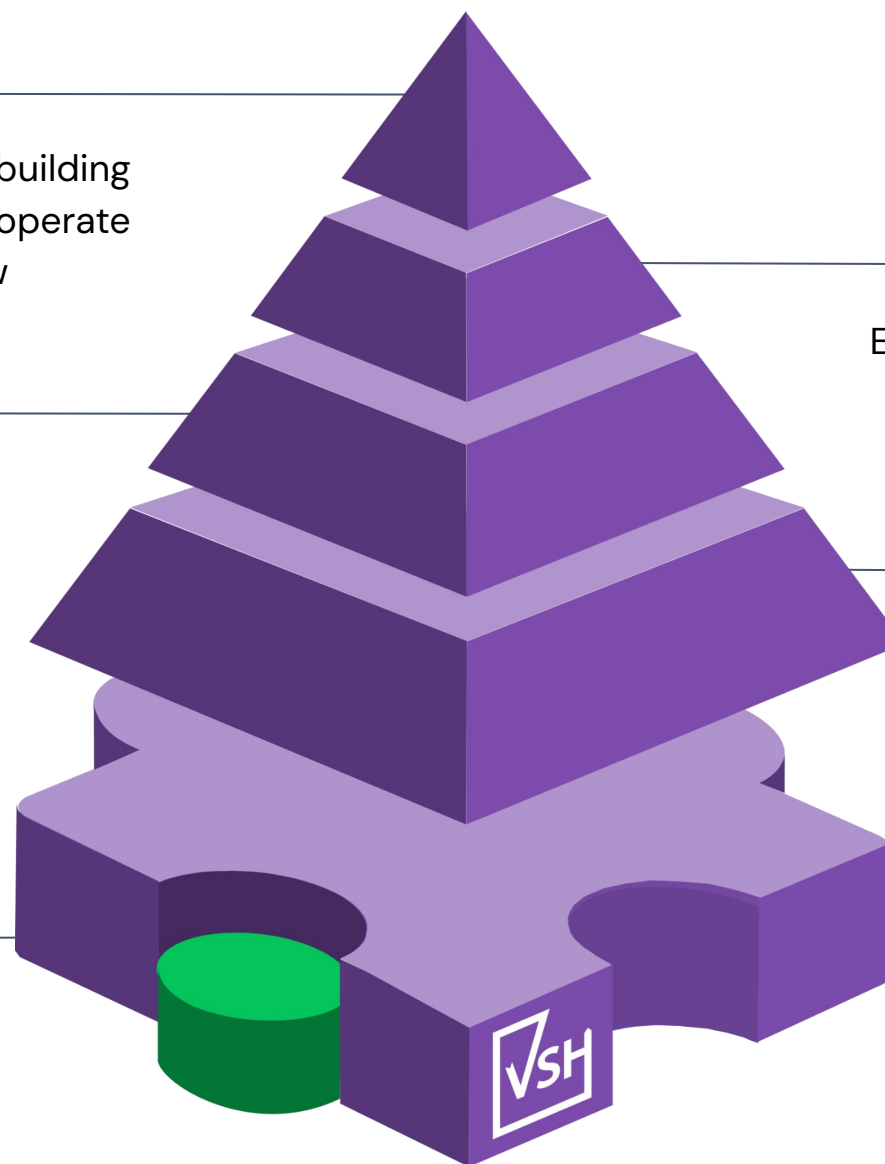

Modularity ●

Our workflows are built up out of self-contained analysis building blocks, each with a specific function and the flexibility to operate independently or be combined into a larger data workflow

Technical Excellence ●

We ensure operational quality, reliability and optimal performance across all building blocks and technologies used, drawing on years of experience in biotech data analysis and workflow development.

Modular Building Block ●

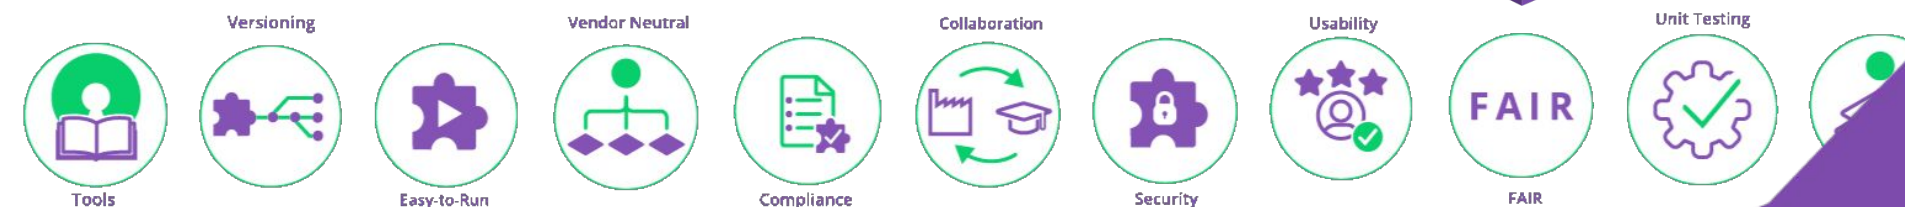

● Standardisation

Each modular building block is built according to a predefined structure, promoting consistent quality, compatibility, and ease of use across workflows.

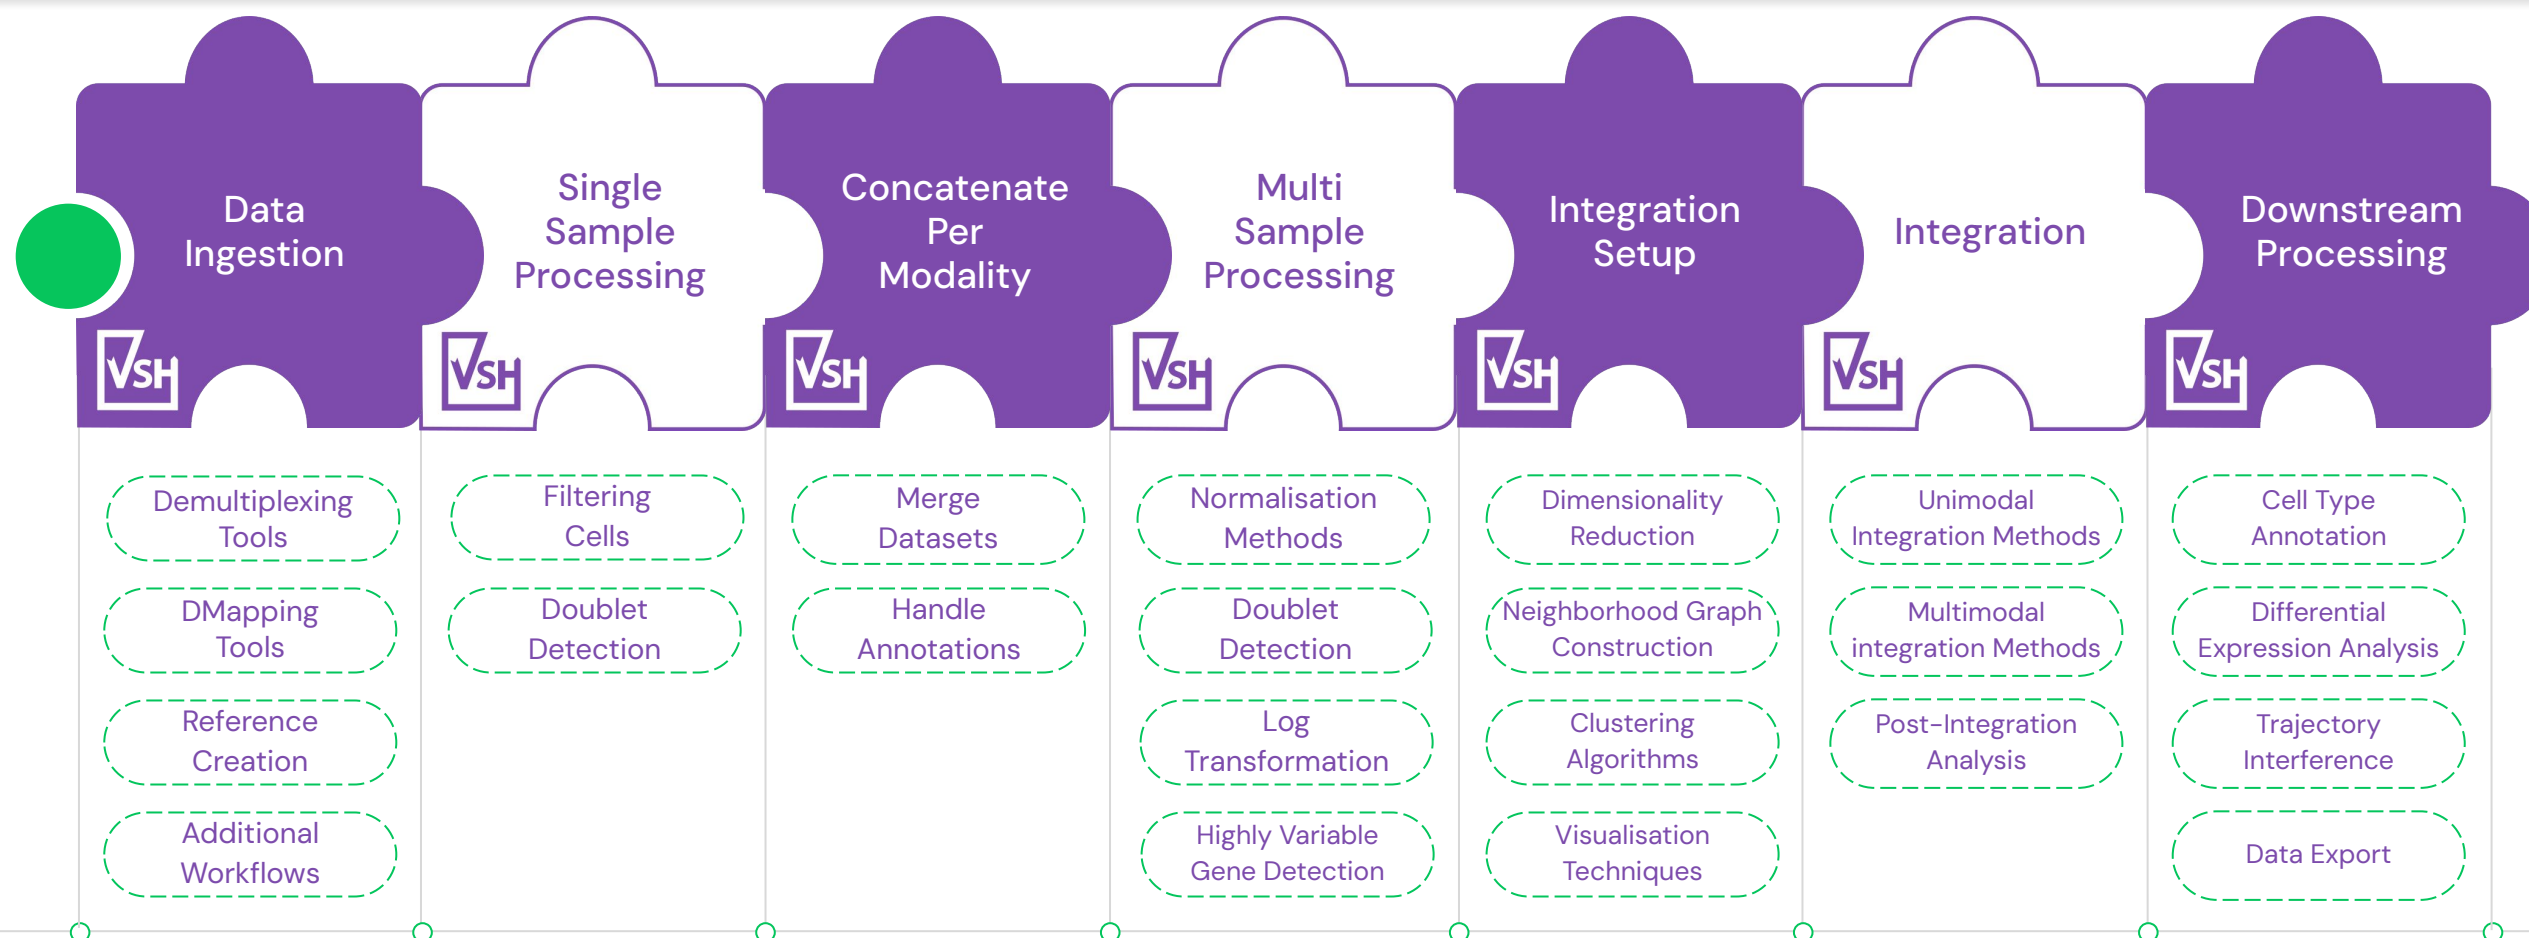

● Code Generation

Our tool Viash takes care of boilerplate code generation to automate the creation of executable workflows based on a user's description and the predefined technical excellence.

Open Pipeline – Modular Single Cell Omics Workflow

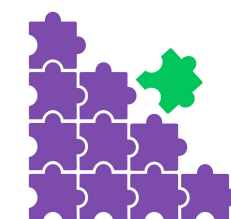

125 Modular Base Components

23 (Sub-) Workflows

4 Modalities:
RNA - Protein
VDJ - ATAC

8 Releases

A Viash Catalogue Workflow

Label Projection

Spatial Deconvolution

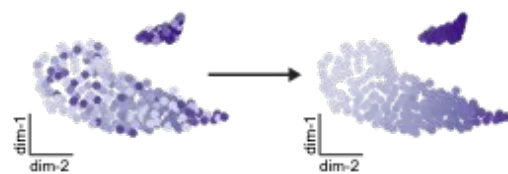

Batch Integration

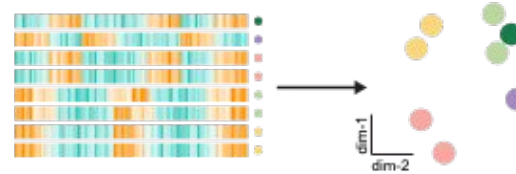

Cell-Cell Communication

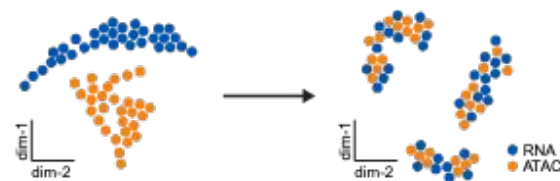

Data Denoising

Dimensionality Reduction

Multimodal Integration

70 Methods

10 Benchmarking Tasks

16 Datasets
